Why did you decide to become a Recon Licensee?

Recon Walls understands that having great gravity retaining wall products is not enough. They combine their large retaining wall block system with knowledge, tools, and testing that allows us to provide a wall solution, not just a good block.

Recon Walls prides itself in using its knowledge and experience to provide solutions and value to its gravity retaining walls as well as geogrid reinforced retaining walls customers. Recon Walls knows that the customers are purchasing a “wall” to solve a grade separation issue. Recon Walls listens and works together with the customers, specifiers, engineers and installers to understand their needs and their budget.

We are happy to promote the Recon Walls solutions because of the performance, the flexibility, the aesthetics and the added value.

What have you been able to achieve with Recon Wall Systems?

We were able to launch Recon Walls in our market and to propose a retaining wall solution for several projects in infrastructure.

One example of a project we did in Wallonia was in Saintes where we installed a retaining wall.

What do you appreciate about the services and support offered by Recon?

Recon Walls offers great support in engineering the best possible solution for the customers. They provide all necessary tools such software for stability analysis and retaining wall layout. They also share their knowledge and expertise, e.g. on market approach and production.
